How the data was verified

Musthafa's PDF cuts every institution name at about 11 characters (e.g. "GLP School T…"). Each entry was therefore verified using all available fields together: the truncated name and school type (GLPS, AMLPS, AUPS, GHSS…), the next letter of the name recovered from the cell overflow, the contact person, the first 8 phone digits, the map plus-code and the city.

In Deepika's data – Yes: the same school type and locality (or the same phone number) was found in Deepika's list. Probable: the only school of that level in that locality. No: not found – mostly private English-medium schools, pre-schools and institutes that Deepika's government list does not cover.

Total schools in area counts Deepika's schools whose name carries that locality name, plus any school matched to a Musthafa entry there. Deepika's list gives only a block for each school, not a locality. So schools without the place name in their title cannot be placed in an area, and the "not yet covered" list is a minimum.

Free pass / telecalling feedback comes from the Free Pass tracker ("Follow-up Remarks", lead status) and the park-visit log. Links were made by phone number, or by school name + area after a manual check.

Second visit / month – Musthafa's sheet has no visit dates, so the month of his own visits cannot be stated. The report shows (a) repeat entries of the same school in his sheet and (b) the month of the school's later park visit (free pass) or group trip (confirmed booking).
