How the cross-check was done

- The Musthafa sheet is cut off in the source PDF: school names show only about the first 10 letters and phone numbers only the first 8 digits. Every row was checked by hand using four details together: the visible part of the name, the school type (GLP / GMLP / AMLP / AUP / GUP / GHSS and so on), the locality, and the phone number (the first 8 digits were compared with Deepika, free-pass and booking phones). The plus code was used to place a school in an area and to find repeat entries.

- **In Deepika? Yes** = the type and locality agree, or the phone number matches. **Probable** = only one Deepika school fits, but the cut-off name or a small spelling or type difference leaves some doubt. **Unclear** = several Deepika schools of the same type are in that locality and the cut-off name cannot tell them apart. These schools are marked "possibly visited" in the not-yet-visited lists. **No** = not in Deepika's data.

- **Area** = the education block or municipality used in Deepika's data. Deepika's last 266 rows have no block, so they were assigned to their municipality by their position in the sheet. A school not in Deepika was placed in the area of the nearest matched school, using its plus code. "Total schools in area" = Deepika schools in that area + schools Musthafa visited there that are not in Deepika.

- **Second visit / month**: Musthafa's sheet has no visit dates. A school counts as having a second visit when it is entered more than once in the sheet, when it later visited the park on a free pass (month of the park visit), or when it booked a trip (month of the booking). The tour month the school gave on the telecall is also shown.

- **Telecalling feedback** comes from the free-pass lead tracker (lead status and follow-up remarks) and the park-visit log. Schools with no free-pass or booking record are shown as "No telecalling record", because no other source holds feedback.
